

Visual Studio Code interface showing a project named "New ASP.NET WebAPI" with a "Post" endpoint. The "Post" endpoint is selected, and the "Body" tab is active. The "Body" tab displays a JSON schema for the "Post" endpoint, which is a "POST" method. The schema is defined as follows:

```

{
  "title": "Post",
  "type": "object",
  "properties": {
    "id": {
      "type": "integer",
      "format": "int32",
      "description": "The ID of the post."
    },
    "title": {
      "type": "string",
      "description": "The title of the post."
    },
    "content": {
      "type": "string",
      "description": "The content of the post."
    },
    "author": {
      "type": "string",
      "description": "The author of the post."
    },
    "created": {
      "type": "string",
      "format": "date-time",
      "description": "The date and time when the post was created."
    },
    "updated": {
      "type": "string",
      "format": "date-time",
      "description": "The date and time when the post was last updated."
    }
  },
  "required": [
    "id",
    "title",
    "content",
    "author",
    "created",
    "updated"
  ]
}

```

The "Body" tab also shows a "Test Results" section with a "Test" button. The "Test" button is clicked, and the test results are displayed in the "Test Results" section. The test results show that the test passed, and the response is as follows:

```

{
  "id": 1,
  "title": "Test Post",
  "content": "Test Content",
  "author": "Test Author",
  "created": "2024-01-01T00:00:00Z",
  "updated": "2024-01-01T00:00:00Z"
}

```
